PROFESSIONAL SUMMARY

Generative AI and Python Backend Engineer experienced in developing scalable backend systems, AI-driven automation workflows, and cloud-native applications using FastAPI, Django, PostgreSQL, Docker, and AWS. Skilled in REST API development, LangChain AI agents, vector search systems, WebSocket infrastructure, and distributed backend architecture. Enhanced backend performance through query optimization, Redis caching, and asynchronous processing while deploying production-ready microservices with secure CI/CD pipelines.

TECHNICAL SKILLS

Programming	Python, SQL, Bash
Frameworks	FastAPI, Django, Django REST Framework
Generative AI	LangChain, LangGraph, OpenAI API, Google Gemini Veo, AI Agents, Vector Search
Databases	PostgreSQL, Redis
Cloud & DevOps	Docker, Kubernetes, AWS EC2, AWS S3, GitHub Actions, CI/CD
Monitoring & Testing	Prometheus, ELK Stack, PyTest
Architecture & Security	OAuth2, JWT Authentication, REST API Design, Microservices, System Design

PROFESSIONAL EXPERIENCE

Backend & AI Developer Intern | Pyonix Technologies | Jan 2025 – Present

- Engineered 6+ backend microservices with Django REST Framework and FastAPI, supporting PostgreSQL-backed production applications.
- Created AI-driven workflow automation using LangChain and LangGraph, streamlining internal database operations.
- Optimized PostgreSQL queries and integrated Redis caching layers, reducing average API response time from nearly 900ms to around 500ms during peak traffic.
- Introduced asynchronous WebSocket and Firebase Cloud Messaging pipelines, enabling reliable low-latency real-time notifications.
- Orchestrated CI/CD deployment workflows through GitHub Actions and Docker, improving deployment consistency across staging and production environments.
- Expanded automated PyTest coverage for critical API routes, helping stabilize backend releases and minimize recurring production issues.

TECHNICAL PROJECTS

Scan2Serve (scan2serve.in) | Core Platform Engineer

- Developed a QR-based restaurant ordering platform capable of handling simultaneous dining sessions and real-time menu updates.
- Implemented WebSocket kitchen notification systems and asynchronous printing queues for efficient order processing.

Ipsy AI E-Commerce Platform | Lead Backend & AI Architect

- Architected a modular Django e-commerce backend for secure product and order workflows.
- Integrated generative AI virtual try-on and 360-degree visualization capabilities using Google Gemini Veo APIs.

Paper Maker App | Solo Backend Developer

- Designed scalable backend architecture for an educational mobile application using Django and PostgreSQL.
- Advanced the application into the Google Play Store testing phase.

CERTIFICATIONS & ACHIEVEMENTS

- Completed Complete Machine Learning Bootcamp by Krish Naik on Udemy covering machine learning, deep learning, NLP, and deployment workflows.
- Cleared TCS National Qualifier Test (NQT) and shortlisted for TCS Prime Interview – 2026.
- Developed and deployed multiple production-ready AI and e-commerce platforms including Scan2Serve, Dapperz, and Ipsy AI.
- Advanced Paper Maker App backend system into Google Play Store testing phase.
- Built real-world LangChain and AI-agent integrations for workflow automation and conversational task execution.
- Hands-on experience deploying containerized applications using Docker, GitHub Actions CI/CD, and AWS infrastructure.

EDUCATION

Sardar Patel College of Engineering | Anand, India

Bachelor of Engineering in Information Technology | Graduation: July 2025

CGPA: 8.5 / 10.0
